## Abstract:

++

## 1 INTRODUCTION

### Idea generation :

Brainstormed (Mahbub & Tanmoy)

1. Collect data (GIS map, and
2. Information needed on depo, warehouse storage location (supply), affected area, and population (demand)
3. Build the conceptual and mathematical models
4. Column generation to solve the optimization problem

Relief distribution model

5 million people, ++

Proposal 1: Proof of Concept.. focus on one district (shelter house, disrupted transportation network), shelter house, NGO.

## 2 METHOD

### 2.1 Data:

#### 2.1.1 Summary of the case study (present situation)

As of today (Aug 25, 2024), more than 500,000 people have taken refuge in around 3,500 shelters in the 11 flood-hit districts, where nearly 750 medical teams are on the ground to provide treatment (ReliefWeb 2024; Paul 2024). Most affected communities are from Feni, Noakhali and Khagrachhari districts; 193,864 people are in 3170 shelters.

Challenges (Brainstormed with **Riad**):

1. Most Bangladesh Army base locations are NOT open-source
2. Emergency response in Bangladesh is often at community level (getting data at national level is almost impossible, partly due to security reasons)

Working on:

1. Collecting GIS map & .json/.shp files of flood impacted regions ++

**Some useful links (ref. everyone):**

1. <https://protirodh.net/flood> (you need to drag the map to the right). Note: view is different in Safari vs Chrome.
2. <http://biwta.port-log.net/live/Map.php>
3. Flood Forecasting & Warning Centre <http://www.ffwc.gov.bd>
4. Water level [data](#)

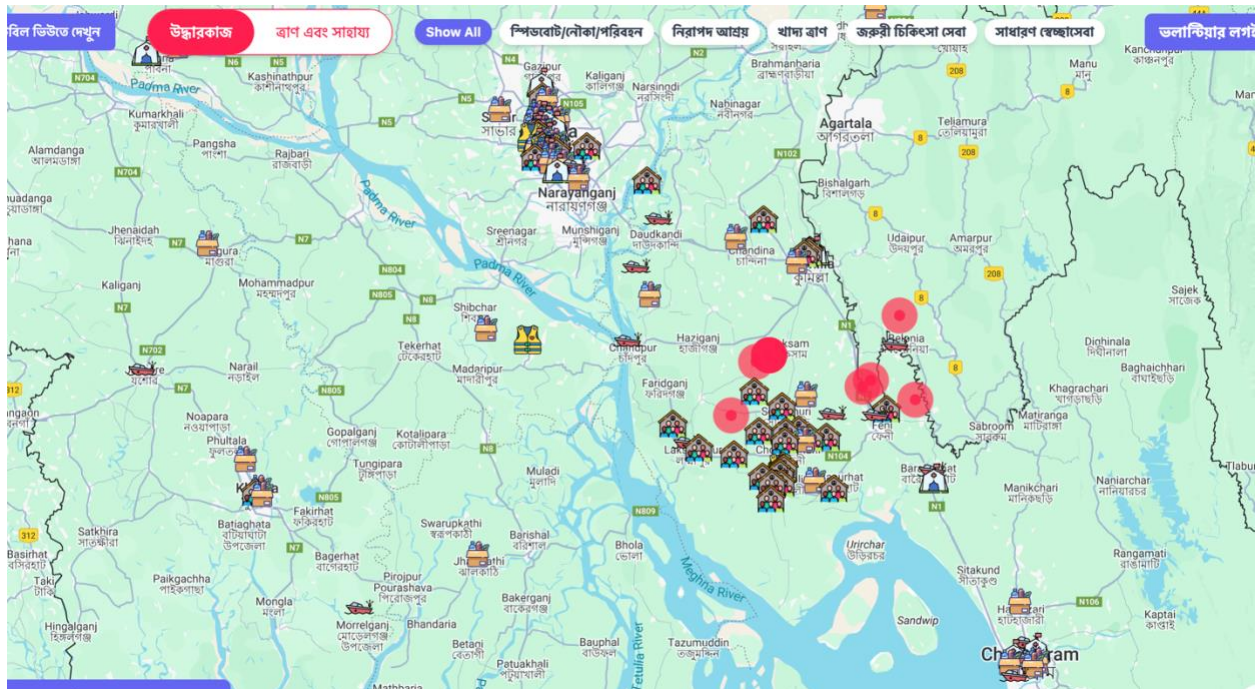

Figure 1 Affected regions in Bangladesh (Source: protirodh.net 2024)

### 2.1.2 Data needed for the optimization model

**Table 1 Metadata and database schema**

<i>Category</i>		<i>Specifics</i>	<i>Data points/ type</i>
Affected region	Road Network Data	Traffic Data: Real-time or historical traffic patterns, congestion data, and road closures. Accessibility: Information on road conditions, including roads that may be flooded or inaccessible.	
		<b>Shelters:</b> Locations of emergency shelters and their capacities. <b>Hospitals:</b> Locations, capacities, and current status (operational or flooded). Locations of communication towers, especially in areas with poor signal coverage.	Geolocation of shelters (& their capacity) Note: Current occupancy in this shelters are location of demand points for our model.
Supplier		<b>Depots/Warehouses:</b> Locations of resource storage facilities.	Geolocation of depot
	Resource Data	Resource Type: Types of resources available for distribution (e.g., food, water, medical supplies). Stock Levels: Current stock levels of each resource at different locations. Resource Requirements: Demand for resources at various locations.	
Affected people (demand)			

Hypothetical table summarizing some of the GIS data elements, shown in Table 2. We may not be able to obtain or produce such precise information for our problem, but this can be a good starting point for our data collection.

**Table 2 Hypothetical datatable (for our brainstorming), produced using ChatGPT**

<b>Data Type</b>	<b>Attributes</b>	<b>Example Values</b>
<b>Road Network</b>	Road ID, Type, Condition, Traffic Level, Closure Status	R123, Highway, Good, High, Open
<b>Bridges</b>	Bridge ID, Location, Condition, Flood Risk	B456, (38.8977, -77.0365), Fair, High
<b>Elevation</b>	Location, Elevation (m)	(38.8977, -77.0365), 50
<b>Flood Zones</b>	Zone ID, Flood Risk Level, Last Flooded Date	FZ789, High, 2024-08-20

Data Type	Attributes	Example Values
<b>Shelters</b>	Shelter ID, Location, Capacity, Occupancy	S101, (38.8977, -77.0365), 200, 150
<b>Hospitals</b>	Hospital ID, Location, Status, Bed Capacity	H202, (38.8977, -77.0365), Operational, 100
<b>Population Density</b>	Location, Density (people/km <sup>2</sup> )	(38.8977, -77.0365), 2000
<b>Weather</b>	Location, Temperature (°C), Rainfall (mm), Wind Speed (km/h)	(38.8977, -77.0365), 25, 50, 10
<b>Resource Stock</b>	Resource ID, Type, Location, Stock Level	R303, Water, Depot 1, 5000 liters
<b>Resource Requirement</b>	Location, Resource Type, Required Quantity	(38.8977, -77.0365), Food, 1000 kg
<b>Communication Towers</b>	Tower ID, Location, Signal Strength	C404, (38.8977, -77.0365), Strong

### 2.1.3 Dataset of our case-study

**Table 3 Dataset of flood-affected region**

Population density of Bangladesh [source link](#); [link2](#)

## 3 RESULT & DISCUSSION

The flood severity plot in Figure 2 is semi-hypothetical (I have manually put the severity after reading some local newspapers). Population density plot in Figure 3 (need to fix color++)

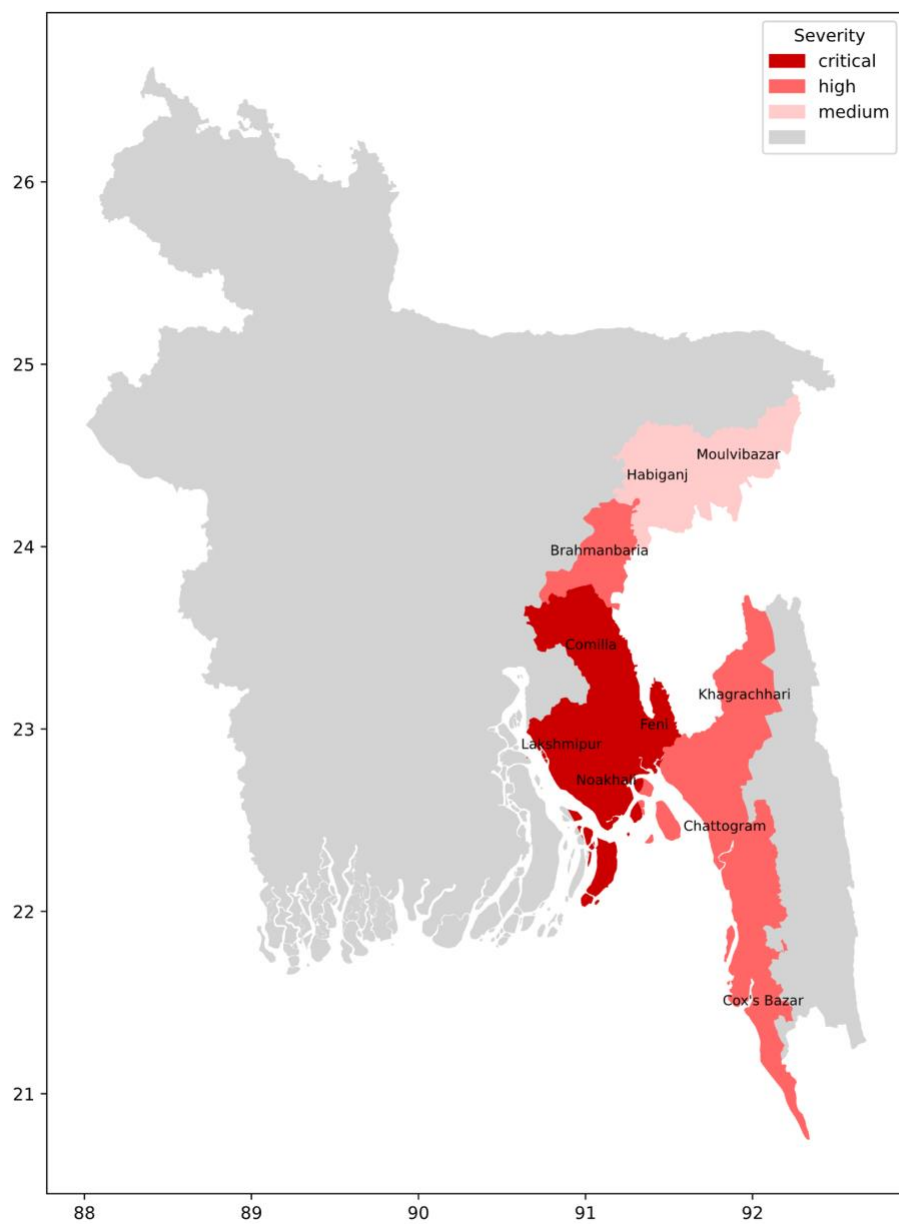

Figure 2 Floor severity in affected districts

Figure 3 Population density

## 4 CONCLUSION
